1. Science

Solar & Space weather events

The level of solar activity¹ this week varied between **low and moderate** this week.

Only M- and X-flares are mentioned, the most energetic one(s) per day are presented in **bold**:

	Monday 12 Aug	Tuesday 13 Aug	Wednesday 14 Aug	Thursday 15 Aug	Friday 16 Aug	Saturday 17 Aug	Sunday 18 Aug
Activity	moderate	low	low	low	low	moderate	low
Flares	M1.5 @ 10:41	-	-	-	-	M3.3 @ 18:24 M1.4 @ 19:33	-

¹ See appendix. All timings are given in UT.

The SWAP images of August 12 and Aug 18 are shown below, with annotated active regions.

Solar Activity

Solar (flaring) activity varied between low and moderate during the week. Three M-level flares were recorded. One of them (on Monday) originated from AR 11817, the other two (a dual eruption) from AR 11818.

In order to view the activity of this week in more detail, we suggest going to the following website from which all the daily (normal and difference) movies can be accessed: <http://proba2.oma.be/ssa>. This page also lists the recorded flaring events.

A weekly overview movie can be found [here](#) (SWAP174; HelioViewer.org).

Details about some of this week's events can be found further below.

- blue: Aluminum Channel of LYRA Unit 2
- purple: SWAVINT (solar intensity derived from 'integrated' SWAP images)

The blue shaded periods correspond to, from left to right:

- SWAP calibration on Tuesday

The orange shaded periods correspond to, from left to right:

- LYRA calibration on Wednesday
- LYRA Unit 1 backup campaign

The red shaded period corresponds to:

- None

Outreach, papers, presentations, etc.

Please consult <http://proba2.oma.be/science/publications> for a list of interesting articles using SWAP & LYRA data, as well as a link to the complete article list.

The science section of this weekly report is also published in the weekly STCE newsletter (<http://www.stce.be/newsletter/newsletter.php>).

Intervention by Koen Stegen for 'Quel Temps', an RTBF program on the french speaking 'national' television. PROBA2 is mentioned several times in the context of its support for Space Weather (http://www.rtbf.be/video/detail_quel-temps?id=1845703)

Guest Investigator Program

- None

2. LYRA instrument status

Calibration

LYRA calibration on Wednesday.

The following science campaigns were performed by LYRA:

- daily U3 observations campaign

LYRA detector temperature

LYRA detector 2 temperature globally varied between 46.7 and 48.0 degrees C, taking into account the daily U3 activation periods; the latter result in a temperature increase of about 0.6 degrees C. During calibration, temperature decreased to 45.2 degrees.

To be explored

- None

3. SWAP instrument status

Calibration

SWAP calibration on Tuesday.

MCPM errors

The number of MCPM recoverable errors increased from 10698 to 10949.

The number of MCPM unrecoverable errors remained at 1127.

Special operations for SWAP, this week:

- None

On Wednesday 14th, an MCPM blockage occurred. This anomaly was resolved by REDU during pass 11806 (18:17:10). The first packet was received at 18:19:54. As a consequence SWAP data expected during pass 11805 was not received.

Shortly after this event (from 19:40 on), LAR delays were no longer implemented for about 2 orbits.

SWAP detector temperature

The SWAP Cold Finger Temperature globally varied between -1.60 and -0.70 degrees C.

Due to missing LAR delays on Wed 14th, from 19:40 on for about 2 orbits, SWAP's temperature rose to around 0.0 degrees twice.

To be explored

- None

4. PROBA2 Science Center Status

The main operator is Koen Stegen.

The following changes were made to the P2SC:

- None

5. Data reception & discussions with MOC

Passes

The delivery of the passes for this week (passes 11784 to 11842) was nominal, except for:

- pass 11805 (BINSWAP_11805 not received; on-board cause).

Data coverage HK

All HK data files (LYRA_AD) have been received, except:

- None.

Data coverage SWAP

All SWAP Science data files (BINSWAP) have been received, except:

- pass 11805, due to the MCPM blockage on Wed 14th.

Total number of images between 2013 Aug 12 0UT and 2013 Aug 19 0UT: 4061

Highest cadence in this period: 30 seconds

Average cadence in this period: 148.95 seconds

Number of image gaps larger than 300 seconds: 1

Largest data gap: 6.50 minutes

Data coverage LYRA

All LYRA Science data files (BINLYRA) have been received, except:

- None.

7. APPENDIX Solar Activity Definitions

In the science section we use the following solar activity standards.

The standard scale for solar activity is:

- very low (almost no flares, only B)
- low (a few C flares)
- moderate (many C flares and at least an M flare)
- high (several M flares and an X flare)
- very high (continuous background of C flares, numerous M flares, more than one X flare)
