Solar Activity

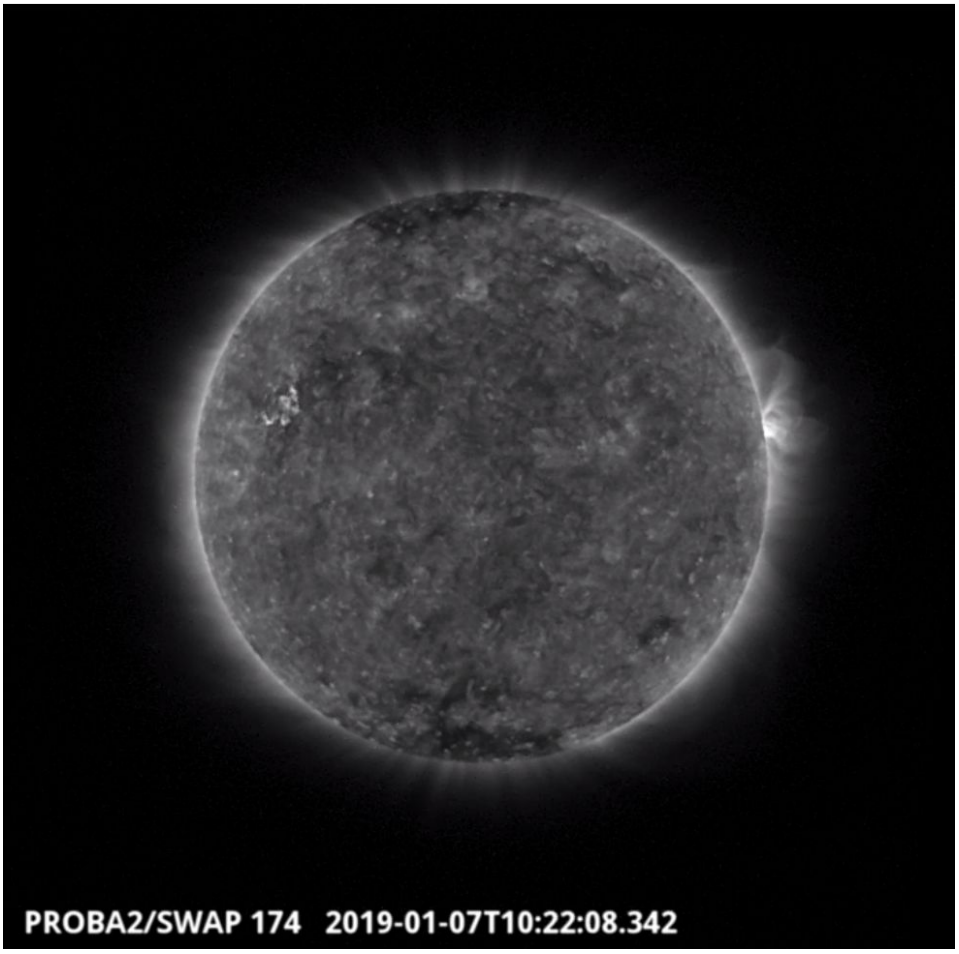
Solar flare activity remained very low during the week.
In order to view the activity of this week in more detail, we suggest to go to the following website from which all the daily (normal and difference) movies can be accessed: http://proba2.oma.be/ssa
This page also lists the recorded flaring events.

A weekly overview movie can be found here (SWAP week 459).

Details about some of this week's events, can be found further below.

If any of the linked movies are unavailable they can be found in the P2SC movie repository here

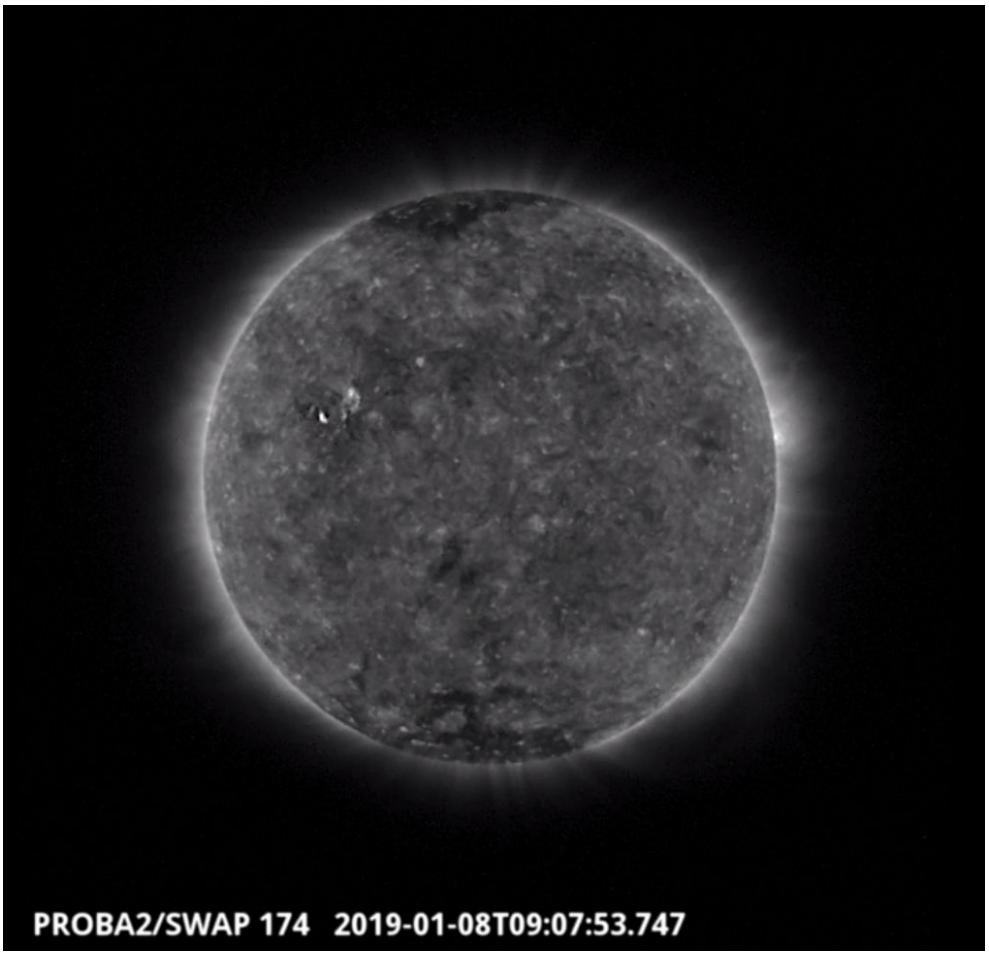
Monday Jan 07



The largest flare of the week (B1.1), which was associated with NOAA AR 2732, was observed by SWAP on 2019-Jan-07 and is visible on the western limb in the SWAP image above taken at 10:22 UT.

Find a movie of the event **here** (SWAP movie).

Tuesday Jan 08



A small brightening and associated flows were observed by SWAP on 2019-Jan-08, visible in the north-eastern quadrant of the solar disk in the image above taken at 09:07 UT.
Find a movie of the event **here** (SWAP movie) and **here** (SWAP difference movie).

7. APPENDIX Solar Activity Definitions

In the science section we use the following solar activity standards.

The standard scale for solar activity is:
- very low (almost no flares, only B)
- low (a few C flares)
- moderate (many C flares and at least an M flare)
- high (several M flares and an X flare)
- very high (continuous background of C flares, numerous M flares, more than one X flare)
