1. Science

Solar & Space weather events

The level of solar activity[1] fluctuated between **very low and moderate** this week.

Only M- and X-flares are mentioned, the most energetic one(s) per day are presented in **bold**:

	Monday 27 Dec	Tuesday 28 Dec	Wednesday 29 Dec	Thursday 30 Dec	Friday 31 Dec	Saturday 1 Jan	Sunday 2 Jan
Activity	low	moderate	very low	very low	low	moderate	low
Flares	-	**M1.6, M1.8**	-	-	-	**M1.1**	-

[1] See appendix. All timings are given in UT.

Solar Activity

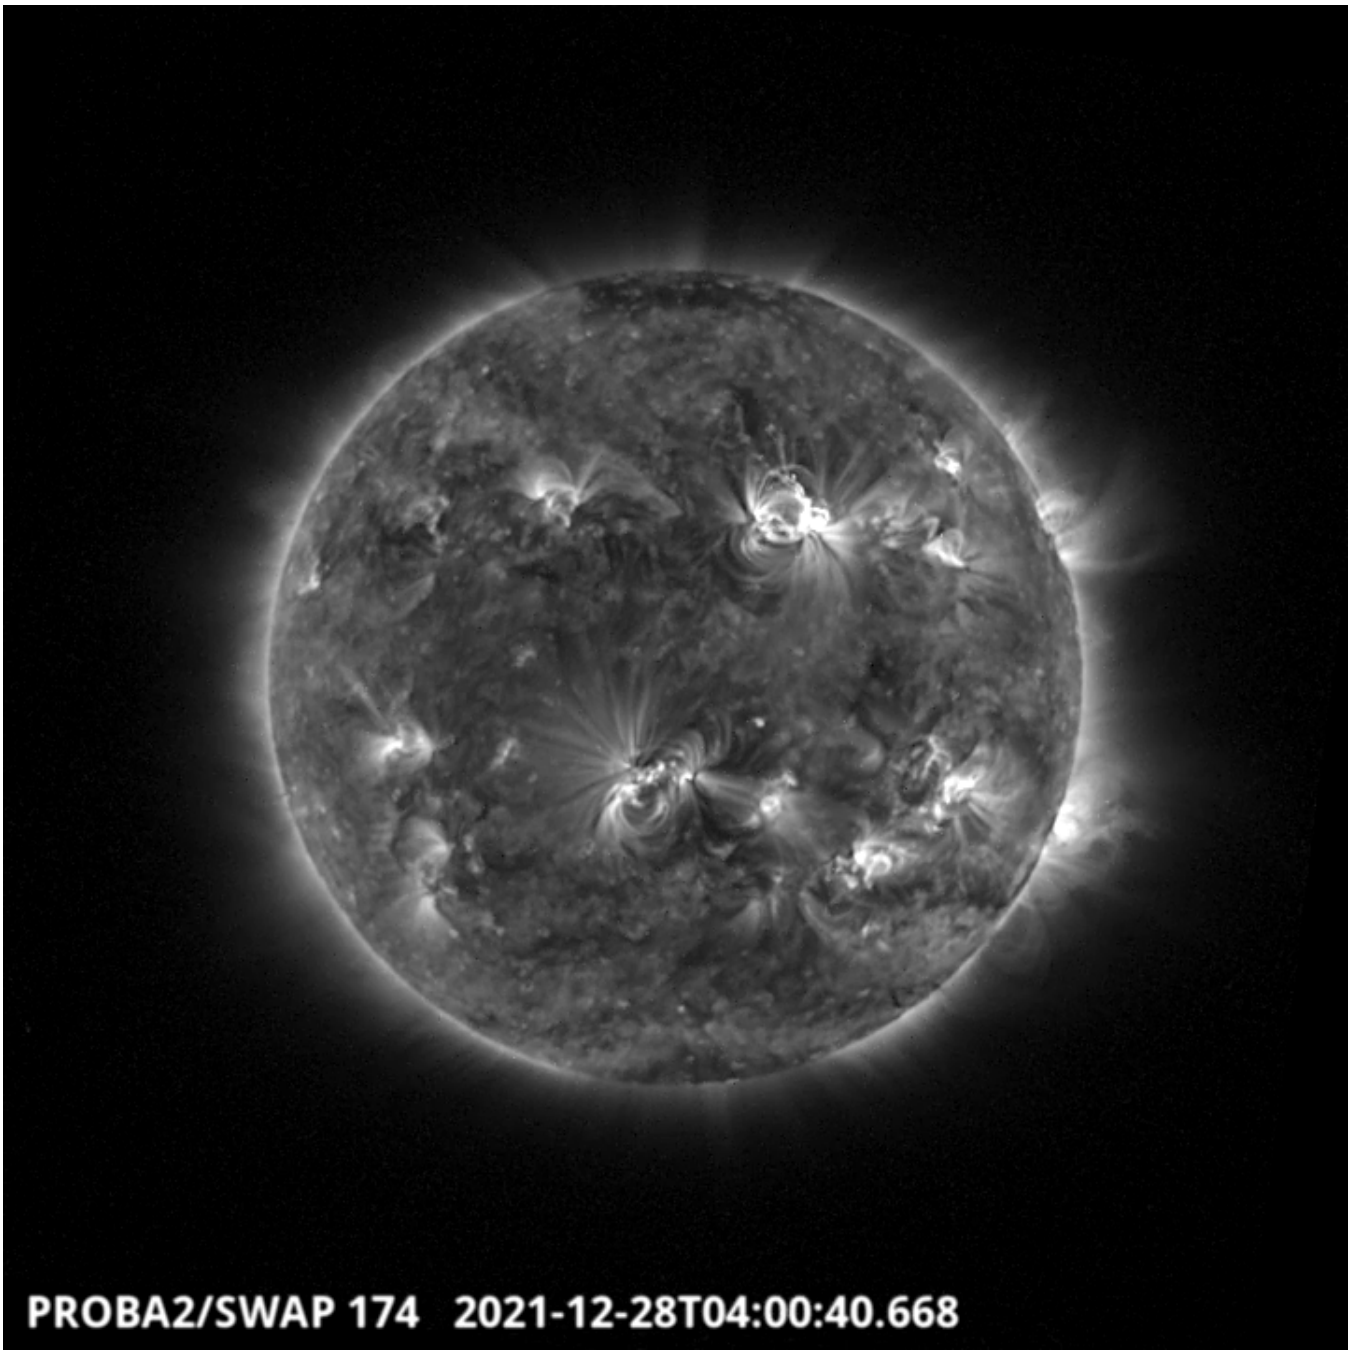
Solar flare activity fluctuated from very low to moderate during the week.
In order to view the activity of this week in more detail, we suggest to go to the following website from which all the daily (normal and difference) movies can be accessed: https://proba2.oma.be/ssa
This page also lists the recorded flaring events.

A weekly overview movie can be found here (SWAP week 614).

Details about some of this week's events can be found further below.

If any of the linked movies are unavailable they can be found in the P2SC movie repository here

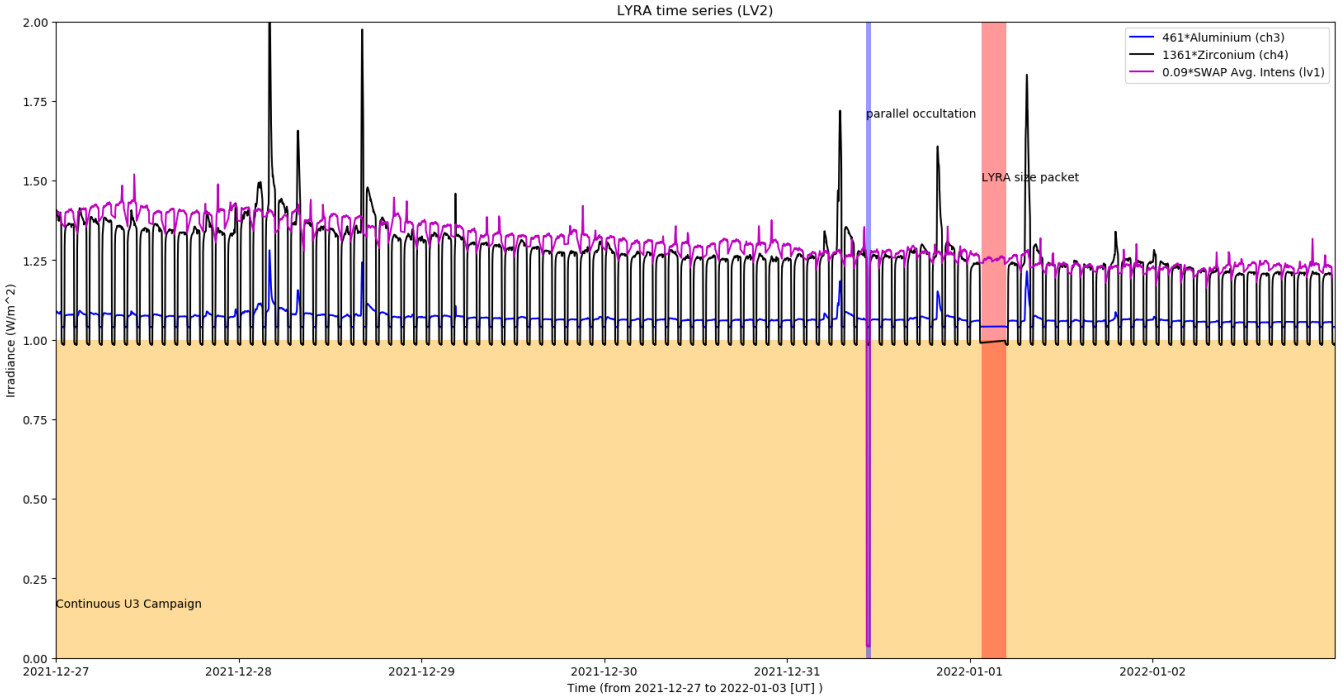
Tuesday Dec 28



A large flow erupted in the West of the Northern Hemisphere around 4:00 UT as it is shown in the SWAP image above. This flow is linked to the M1.8 flare produced by the NOAA active region 2918. Find a movie of the events **here** (SWAP movie)

An overview of the weekly LYRA & SWAP data is provided below:
The following curves are visible:

- black: Zirconium Channel LYRA Unit 2
- blue: Aluminium Channel of LYRA Unit 2
- purple: SWAVINT (SWAP Average Intensity; integrated solar intensity per SWAP image pixel)



Operations and Calibrations:

The blue shaded periods related to SWAP, correspond to, from left to right:

- parallel occultation with LYRA, 2021-12-31

The orange shaded periods related to LYRA correspond to, from left to right:

- Continuous Unit3 campaign

The red shaded periods related to other issues corresponds to:

- Possibly due to corrupted packets.The BINLYRA for pass 39663 file failed to process, which produced a gap in the data.

7. APPENDIX Solar Activity Definitions

In the science section we use the following solar activity standards.

The standard scale for solar activity is:
- very low (almost no flares, only B)
- low (a few C flares)
- moderate (many C flares and at least an M flare)
- high (several M flares and an X flare)
- very high (continuous background of C flares, numerous M flares, more than one X flare)
