Solar & Space weather events

The level of solar activity[1] was **low** this week.

Only M- and X-flares are mentioned, the most energetic one(s) per day are presented in **bold**:

	Monday 31 Jan	Tuesday 1 Feb	Wednesday 2 Feb	Thursday 3 Feb	Friday 4 Feb	Saturday 5 Feb	Sunday 6 Feb
Activity	low	low	low	low	low	low	low
Flares	-	-	-	-	-	-	-

[1] See appendix. All timings are given in UT.

Solar Activity

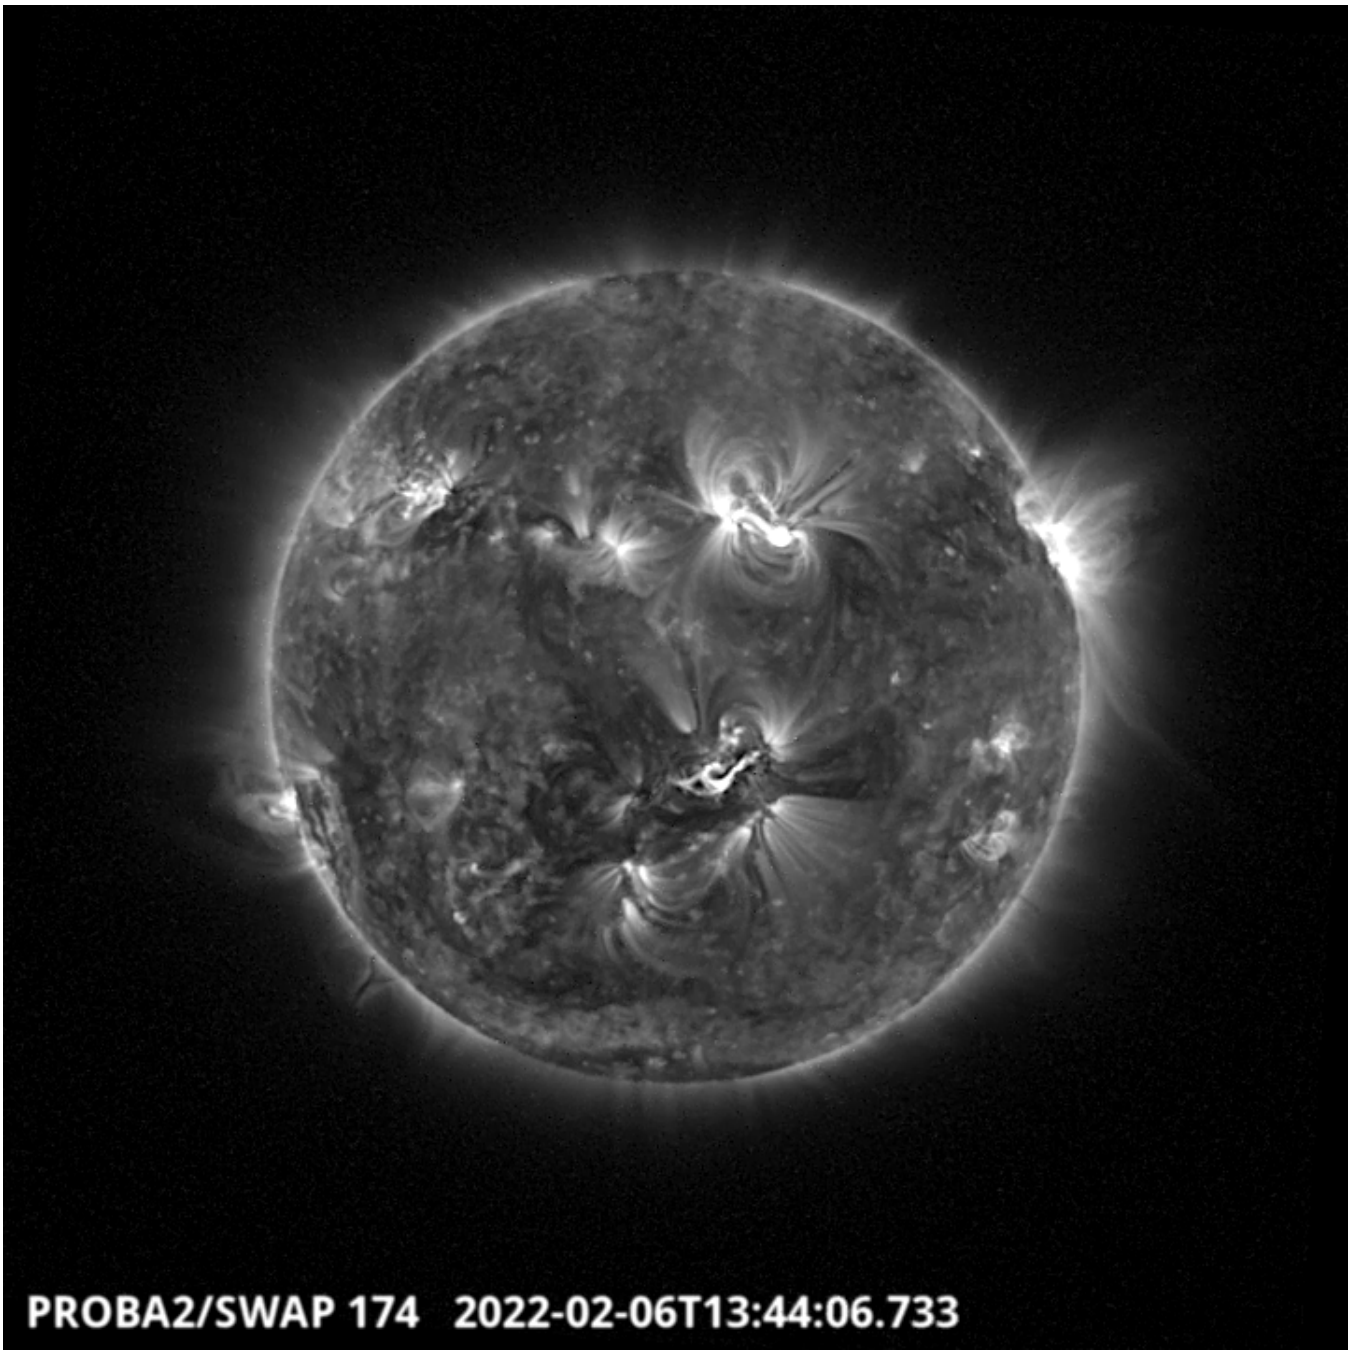
Solar flare activity was low during the week.
In order to view the activity of this week in more detail, we suggest to go to the following website from which all the daily (normal and difference) movies can be accessed: https://proba2.oma.be/ssa
This page also lists the recorded flaring events.

A weekly overview movie can be found here (SWAP week 619).

Details about some of this week's events can be found further below.

If any of the linked movies are unavailable they can be found in the P2SC movie repository here

Sunday Feb 06



NOAA active region 2939 close to the center of the Southern hemisphere produced a filament eruption and a long duration C3.1 class flare with its maximum intensity around 13:44 UT.
Find a movie of the events here (SWAP difference movie)

7. APPENDIX Solar Activity Definitions

In the science section we use the following solar activity standards.

The standard scale for solar activity is:
- very low (almost no flares, only B)
- low (a few C flares)
- moderate (many C flares and at least an M flare)
- high (several M flares and an X flare)
- very high (continuous background of C flares, numerous M flares, more than one X flare)
