Solar Activity

Solar flare activity fluctuated from low to moderate during the week.

In order to view the activity of this week in more detail, we suggest to go to the following website from which all the daily (normal and difference) movies can be accessed: <https://proba2.oma.be/ssa>

This page also lists the recorded flaring events.

A weekly overview movie can be found [here](#) (SWAP week 712).

Details about some of this week's events can be found further below.

If any of the linked movies are unavailable they can be found in the P2SC movie repository [here](#)

Saturday Nov 18

The second largest flare of this week, an M1.1, (the largest one, an M1.2, occurred during a PROBA2 occultation), was observed by LYRA (top panel) and SWAP (bottom panel). The flare peaked on 2023-Nov-18 at 16:44 UT. It occurred on the eastern limb, and it originated from NOAA AR3490, which was just rotating over the visible side of the solar disc.

Find a SWAP movie of the event [here](#).

An overview of the weekly LYRA & SWAP data is provided below:

The following curves are visible:

- black: Zirconium Channel LYRA Unit 2
- blue: Aluminium Channel of LYRA Unit 2
- purple: SWAVINT (SWAP Average Intensity; integrated solar intensity per SWAP image pixel)

Operations and Calibrations:

The blue shaded periods related to SWAP, correspond to, from left to right:

- Mosaic campaign, 2023-Nov-15
- Parallel occultation with LYRA, 2023-Nov-17

The orange shaded periods related to LYRA correspond to, from left to right:

- Continuous Unit 3 campaign, as of 2023-Nov-13 (only closed for monthly unit1 campaign)
- Monthly Unit 1 campaign, 2023-Nov-15

The red shaded periods related to other issues corresponds to:

- None

7. APPENDIX Solar Activity Definitions

In the science section we use the following solar activity standards.

The standard scale for solar activity is:

- very low (almost no flares, only B)
- low (a few C flares)
- moderate (many C flares and at least an M flare)
- high (several M flares and an X flare)
- very high (continuous background of C flares, numerous M flares, more than one X flare)
