Solar Activity

Solar flare activity fluctuated from low to moderate during the week.

In order to view the activity of this week in more detail, we suggest to go to the following website from which all the daily (normal and difference) movies can be accessed: <https://proba2.oma.be/ssa>

This page also lists the recorded flaring events.

A weekly overview movie can be found [here](#) (SWAP week 744).

Details about some of this week's events can be found further below.

If any of the linked movies are unavailable they can be found in the P2SC movie repository [here](#)

Monday Jun 24

The largest flare of this week was an M1.8, and it was observed by LYRA (top panel) and SWAP (bottom panel). The flare peaked on 2024-Jun-24 at 04:52 UT. It occurred at the south-western limb, originating from NOAA AR3712.

Find a SWAP movie of the event [here](#).

An overview of the weekly LYRA & SWAP data is provided below:

7. APPENDIX Solar Activity Definitions

In the science section we use the following solar activity standards.

The standard scale for solar activity is:

- very low (almost no flares, only B)
- low (a few C flares)
- moderate (many C flares and at least an M flare)
- high (several M flares and an X flare)
- very high (continuous background of C flares, numerous M flares, more than one X flare)
