Solar & Space weather events

The level of solar activity[1] fluctuated between **low and moderate** this week.

Only M- and X-flares are mentioned, the most energetic one(s) per day are presented in **bold**:

	Monday 06 Jan	Tuesday 07 Jan	Wednesday 08 Jan	Thursday 09 Jan	Friday 10 Jan	Saturday 11 Jan	Sunday 12 Jan
Activity	moderate	moderate	low	moderate	low	low	low
Flares	**M4.8** **M1.4** **M3.1**	**M1.1**	-	**M1.1**	-	-	-

[1] See appendix. All timings are given in UT.

Solar Activity

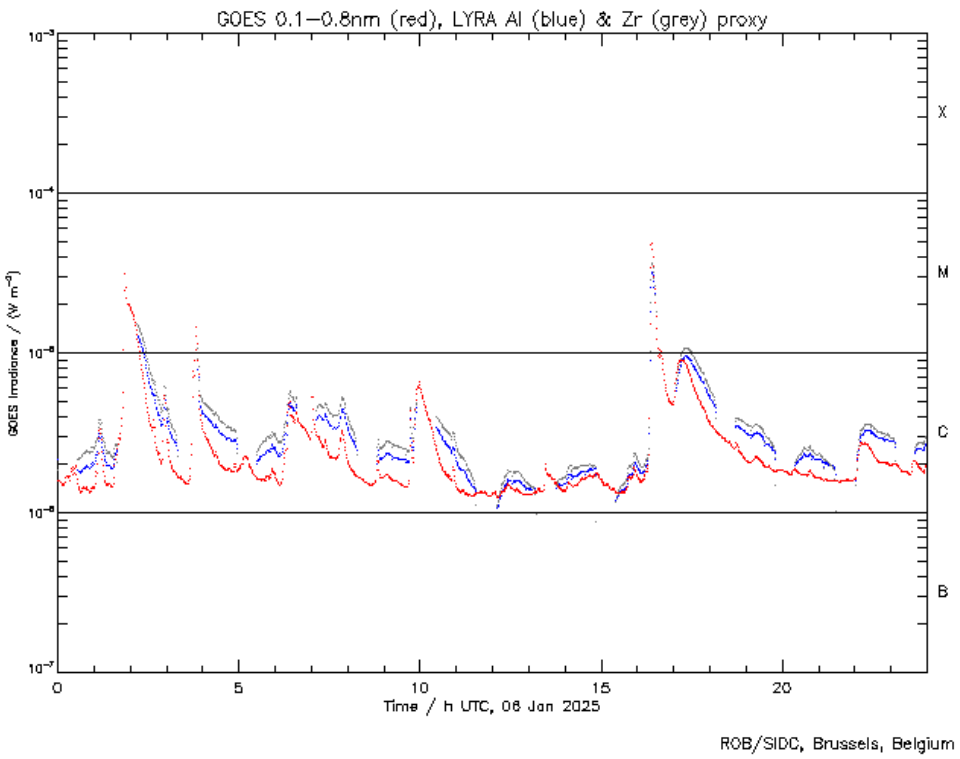
Solar flare activity fluctuated from low to moderate during the week.
In order to view the activity of this week in more detail, we suggest to go to the following website from which all the daily (normal and difference) movies can be accessed: https://proba2.oma.be/ssa
This page also lists the recorded flaring events.

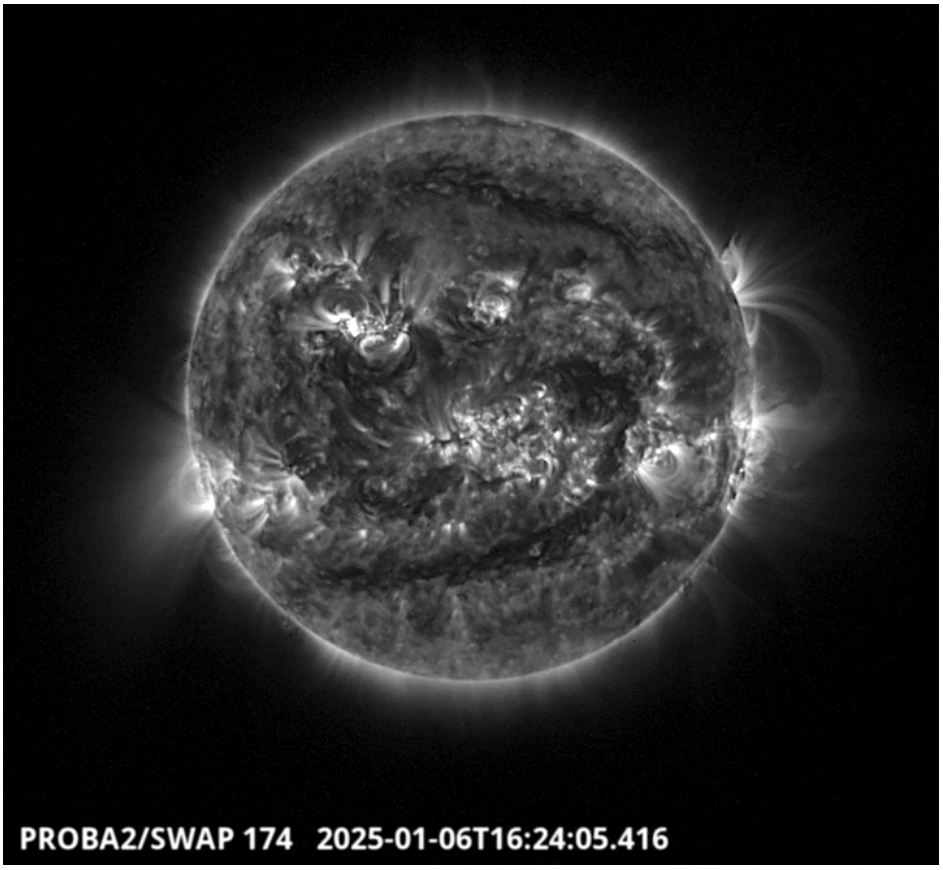
A weekly overview movie can be found here (SWAP week 772).

Details about some of this week's events can be found further below.

If any of the linked movies are unavailable they can be found in the P2SC movie repository here

Monday Jan 06



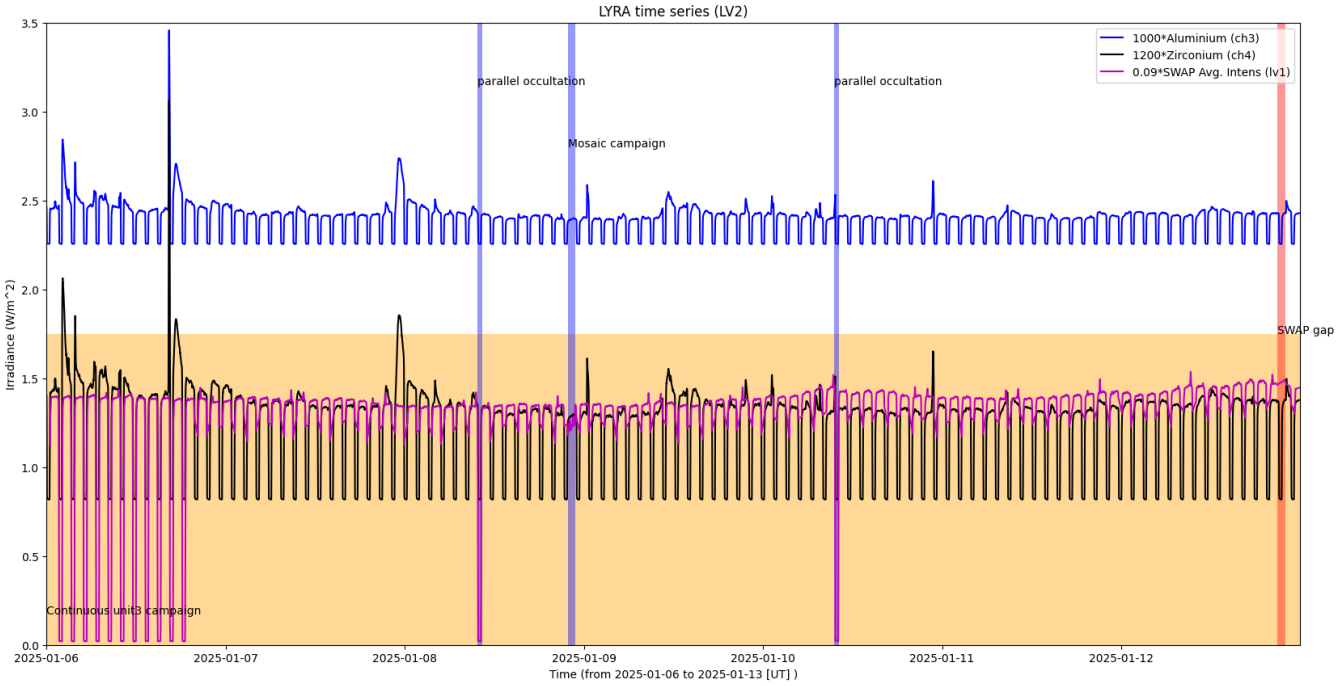


The largest flare of this week was an M4.8, and it was observed by LYRA (top panel) and SWAP (bottom panel). The flare peaked on 2025-Jan-06 at 16:24 UT. It occurred in the north-eastern quadrant of the Sun, originating from active region NOAA3947.

Find a SWAP movie of the event here.

An overview of the weekly LYRA & SWAP data is provided below:
The following curves are visible:

- black: Zirconium Channel LYRA Unit 2
- blue: Aluminium Channel of LYRA Unit 2
- purple: SWAVINT (SWAP Average Intensity; integrated solar intensity per SWAP image pixel)



Operations and Calibrations:

The blue shaded periods related to SWAP, correspond to, from left to right:

- SWAP and LYRA parallel occultation, 2025-Jan-08
- SWAP weekly mosaic, 2025-Jan-08
- SWAP and LYRA parallel occultation, 2025-Jan-10

The orange shaded periods related to LYRA correspond to, from left to right:

- Continuous unit 3 campaign, during the entire week

The red shaded periods related to other issues corresponds to:

- SWAP data gap during pass 49331 (2025-Jan-12), between 20:52:52 - 21:57:19 UT

7. APPENDIX Solar Activity Definitions

In the science section we use the following solar activity standards.

The standard scale for solar activity is:
- very low (almost no flares, only B)
- low (a few C flares)
- moderate (many C flares and at least an M flare)
- high (several M flares and an X flare)
- very high (continuous background of C flares, numerous M flares, more than one X flare)
