1. Science

Solar & Space weather events

The level of solar activity¹ fluctuated between **low and moderate** this week.

Only M- and X-flares are mentioned, the most energetic one(s) per day are presented in **bold**:

	Monday 20 Jan	Tuesday 21 Jan	Wednesday 22 Jan	Thursday 23 Jan	Friday 24 Jan	Saturday 25 Jan	Sunday 26 Jan
Activity	low	moderate	moderate	low	moderate	low	low
Flares	-	M3.3	M1.3	-	M2.7	-	-

¹ See appendix. All timings are given in UT.

Solar Activity

Solar flare activity fluctuated from low to moderate during the week.

In order to view the activity of this week in more detail, we suggest to go to the following website from which all the daily (normal and difference) movies can be accessed: <https://proba2.oma.be/ssa>

This page also lists the recorded flaring events.

A weekly overview movie can be found [here](#) (SWAP week 774).

Details about some of this week's events can be found further below.

If any of the linked movies are unavailable they can be found in the P2SC movie repository [here](#)

Tuesday Jan 21

The largest flare of this week was an M3.3, and it was observed by LYRA (top panel) and SWAP (bottom panel). The flare peaked on 2025-Jan-21 at 10:39 UT. It occurred in the south-eastern quadrant of the Sun, originating from active region NOAA3967.

Find a SWAP movie of the event [here](#).

An overview of the weekly LYRA & SWAP data is provided below:

The following curves are visible:

- black: Zirconium Channel LYRA Unit 2
- blue: Aluminium Channel of LYRA Unit 2
- purple: SWAVINT (SWAP Average Intensity; integrated solar intensity per SWAP image pixel)

Operations and Calibrations:

The blue shaded periods related to SWAP, correspond to, from left to right:

- SWAP and LYRA parallel occultation, 2025-Jan-20
- SWAP and LYRA parallel occultation, 2025-Jan-22
- SWAP weekly mosaic, 2025-Jan-22
- SWAP and LYRA parallel occultation, 2025-Jan-24

The orange shaded periods related to LYRA correspond to, from left to right:

- Continuous unit 3 campaign, during the entire week

The red shaded periods related to other issues corresponds to:

- HK, LYRA and SWAP calibrated data gap during pass 49439 (2025-Jan-25), between 03:00 - 04:45 UT

2. LYRA instrument status

IOS

Start IOS	Mon Jan 20 2025	LYIOS01139
End IOS	Sun Jan 26 2025	LYIOS01139

LYRA detector temperature

LYRA detector 2 temperature globally varied between 45.84 and 49.63 °C.

3. SWAP instrument status

MCPM errors

The number of MCPM recoverable errors increased from 789 to 916.

The number of MCPM unrecoverable errors remained at 0.

IOS

Start IOS	Mon Jan 20 2025	IOS01260
End IOS	Sun Jan 26 2025	IOS01261

SWAP detector temperature

The SWAP Cold Finger Temperature globally varied between -3.05 and -0.25 °C.

4. PROBA2 Science Center Status

The following changes were made to the P2SC:

- None.

5. Data reception & discussions with MOC

Passes

The delivery of the passes for this week (passes 49394 to 49454) was nominal, except for:

- 49439.

Data coverage HK

All HK data files (LYRA_AD) have been received, except:

- small and incomplete LYRA_AD for pass 49439 (2025-Jan-25), resulting in HK data gap between 03:12 - 04:51 UT.

Data coverage SWAP

All SWAP Science data files (BINSWAP) have been received, except:

- very small BINSWAP for pass 49439 (2025-Jan-25); however, some data was received with following passes, but due to missing HK, there is a gap in SWAP calibrated data between 02:58 - 04:45 UT.

Total number of images between 2025 Jan 20 00:00 UT and 2025 Jan 27 00:00 UT: 4406

Highest cadence in this period: 18 seconds

Average cadence in this period: 136.96 seconds

Number of image gaps larger than 300 seconds: 161

Largest data gap: 38.73 minutes

Data coverage LYRA

All LYRA Science data files (BINLYRA) have been received, except:

- BINLYRA for pass 49439 (2025-Jan-25), resulting in LYRA data gap between 03:09 - 04:45 UT.

6. APPENDIX: Frequently used acronyms

ADPMS	Advanced Data and Power Management System
AOCS	Attitude and Orbit Control System
APS	Active Pixel image Sensor
ASIC	Application Specific Integrated Circuit
BBE	Base Band Equipment
CME	Coronal Mass Ejection
COGEX	Cool Gas Generator Experiment
CRC	Cyclic Redundancy Check
DAC	Data Acquisition Controller
DBR	Deployment, backup & recovery
DDA	Decommutated data archive
ESP	Experimental Solar Panel
FITS	Flexible Image Transport System
FOV	Field Of View FPA Focal Plane Assembly
FPGA	Field Programmable Gate Arrays
GPS	Global Positioning System
HK	Housekeeping
IOS	Instrument Operations Sheet
LED	Light Emitting Diode
LYRA	LYman alpha RAdiometer
LYTMR	LYRA Telemetry Reformatter (software module of P2SC)
LYEDG	LYRA Engineering Data Generator (software module of P2SC)
MCPM	Mass Memory, Compression and Packetisation Module
MOC	Mission Operation Center
NDR	Non Destructive Readout
OBSW	On board Software
PI	Principal Investigator
P2SC	PROBA2 Science Center
ROB	Royal Observatory of Belgium
SAA	South Atlantic Anomaly
SEU	Single Event Upset
SoFAST	Solar Feature Automated Search Tool
SWAP	Sun Watcher using APS detector and image Processing
SWAVINT	SWAP AVerage INTensity
SWBSDG	SWAP Base Science Data Generator
SWEDG	SWAP Engineering Data Generator (software module of P2SC)
SWTMR	SWAP Telemetry Reformatter (software module of P2SC)
TBC	To Be Confirmed
TBD	To Be Defined
TC	Telecommand
UTC	Coordinated Universal Time
UV	Ultraviolet
VFC	Voltage to Frequency Converter

7. APPENDIX Solar Activity Definitions

In the science section we use the following solar activity standards.

The standard scale for solar activity is:

- very low (almost no flares, only B)
- low (a few C flares)
- moderate (many C flares and at least an M flare)
- high (several M flares and an X flare)
- very high (continuous background of C flares, numerous M flares, more than one X flare)
