Solar & Space weather events

The level of solar activity[1] fluctuated between **low and high this** week.

Only M- and X-flares are mentioned, the most energetic one(s) per day are presented in **bold**:

	Monday 12 May	Tuesday 13 May	Wednesday 14 May	Thursday 15 May	Friday 16 May	Saturday 17 May	Sunday 18 May
Activity	low	high	high	moderate	low	low	low
Flares	-	**X1.2**	**X2.7, M1.2, M5.3**	**M2.1**	-	-	-

[1] See appendix. All timings are given in UT.

Solar Activity

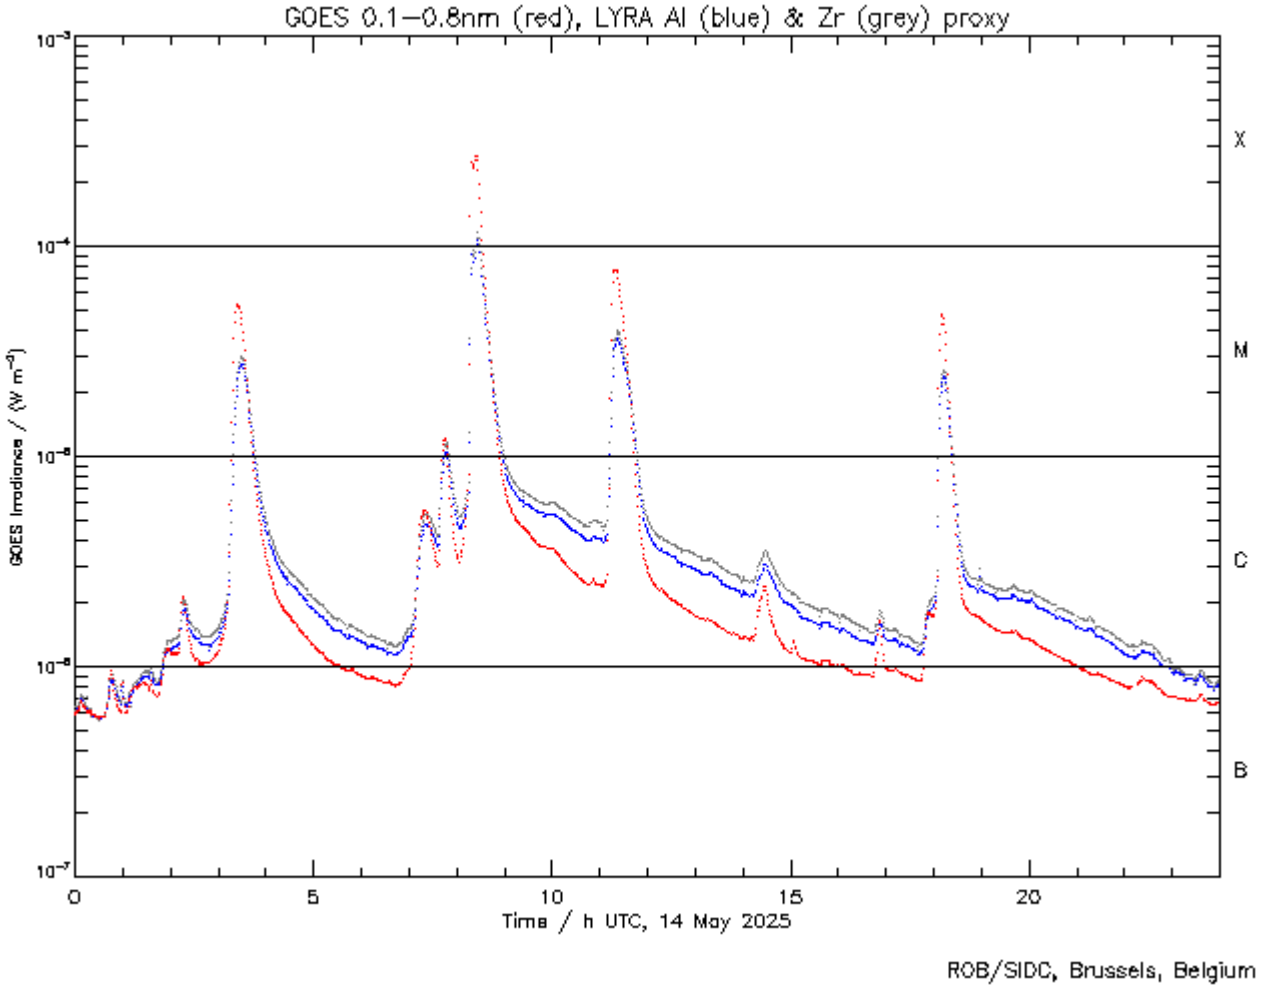
Solar flare activity fluctuated from low to high during the week.
In order to view the activity of this week in more detail, we suggest to go to the following website from which all the daily (normal and difference) movies can be accessed: https://proba2.oma.be/ssa
This page also lists the recorded flaring events.

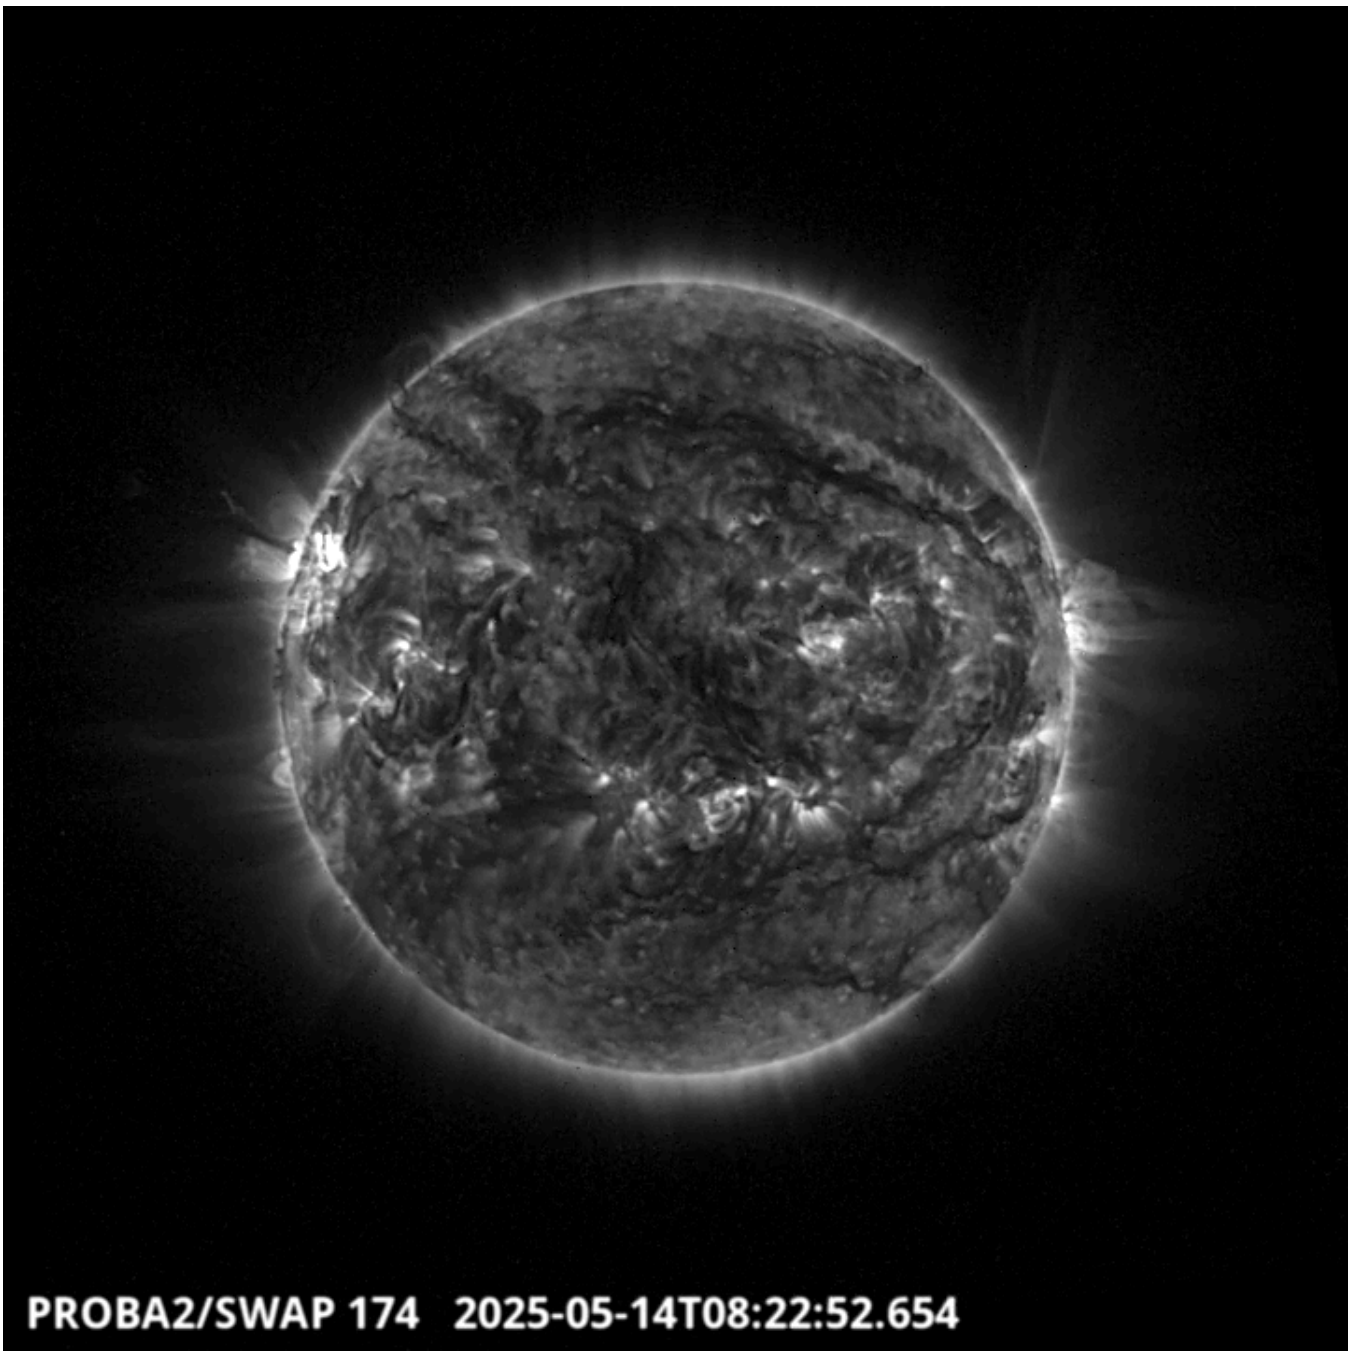
A weekly overview movie can be found here (SWAP week 790).

Details about some of this week's events can be found further below.

If any of the linked movies are unavailable they can be found in the P2SC movie repository here

Wednesday May 14



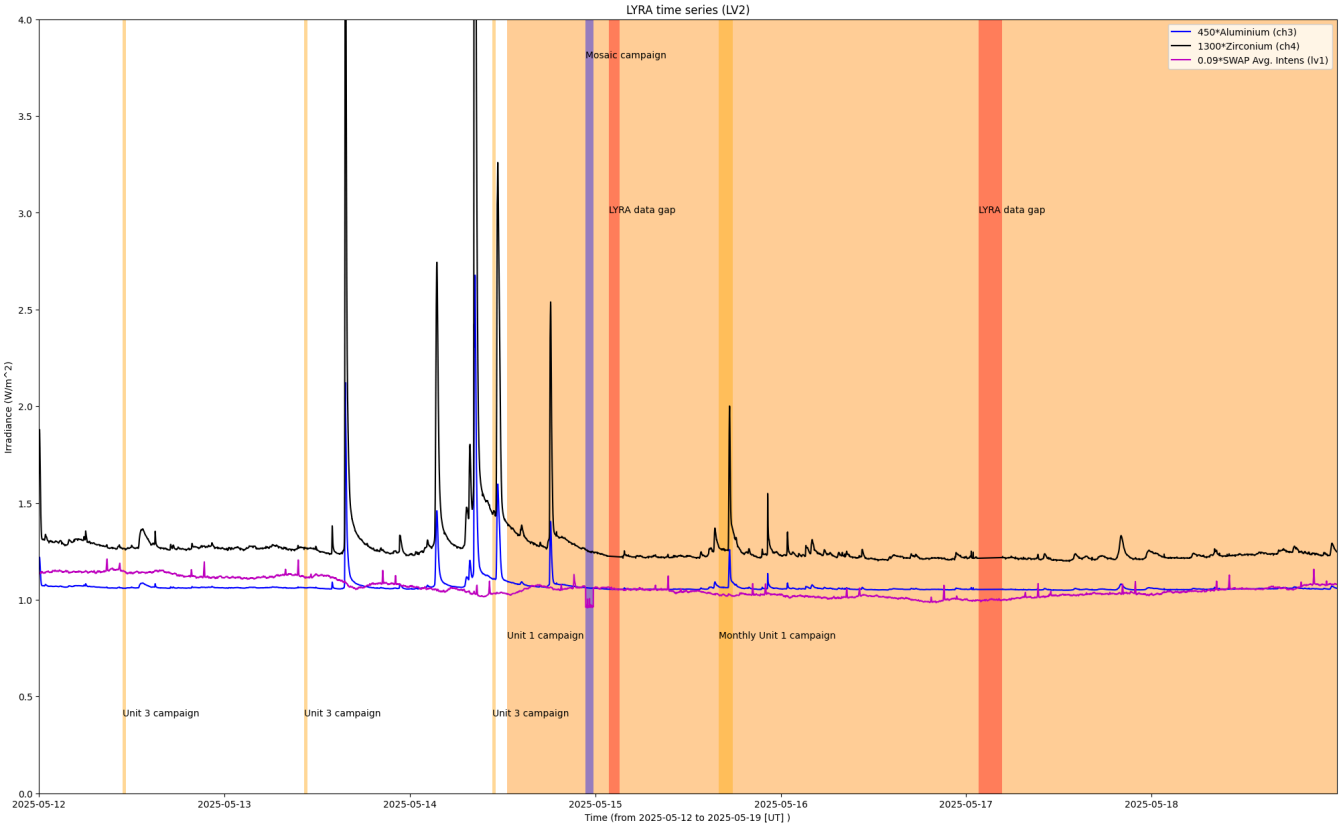


The highest flare of the week is a X2.5 which has been recorded by LYRA and SWAP (see above) peaking at 8:25 UT. It has been produced by the NOAA active region4087 localized in the North East part of the solar disc.

Find a SWAP movie of the event here.

An overview of the weekly LYRA & SWAP data is provided below:
The following curves are visible:

- black: Zirconium Channel LYRA Unit 2
- blue: Aluminium Channel of LYRA Unit 2
- purple: SWAVINT (SWAP Average Intensity; integrated solar intensity per SWAP image pixel)



Operations and Calibrations:

The blue shaded periods related to SWAP, correspond to, from left to right:

- Mosaïc campaign, 2025-May-14

The orange shaded periods related to LYRA correspond to, from left to right:

- Daily Unit 3 campaigns,2025-May-12
- Daily Unit 3 campaigns,2025-May-13

7. APPENDIX Solar Activity Definitions

In the science section we use the following solar activity standards.

The standard scale for solar activity is:
- very low (almost no flares, only B)
- low (a few C flares)
- moderate (many C flares and at least an M flare)
- high (several M flares and an X flare)
- very high (continuous background of C flares, numerous M flares, more than one X flare)
